

Hospital Booking System for the Outpatient Department (OPD)

Screen List | Team Aura | Version 1.0

1. Purpose

This document defines the screens required for the Hospital Booking System prototype. Each screen is associated with an actor, a purpose, and one or more functional requirements (FRs). The Screen List is intended to guide prototype implementation and maintain traceability between requirements and user interface screens.

2. Actors and Scope

The system has two roles: User (Patient) and Admin. Doctors are stakeholders, but the current SRS does not define a doctor-facing role.

The current project materials include patient registration/login, viewing doctor information and availability, booking appointments, checking token queues, cancelling/rescheduling appointments, and admin management of doctors, schedules, appointments, and token queues.

3. Screen List

Screen ID	Screen Name	Actor	Purpose / Main Responsibility	Related FR
S-01	Register	Patient	Create a patient account using the personal information required by the system.	FR-1
S-02	Login	Patient / Admin	Allow an existing patient or admin to sign in before accessing role-specific functions.	FR-1
S-03	Doctor List and Information	Patient	Display doctor information and specializations so patients can identify a suitable doctor.	FR-2
S-04	Doctor Schedule and Availability	Patient	Display available dates and times for a selected doctor; unavailable slots cannot be selected.	FR-2
S-05	Appointment Booking	Patient	Allow the patient to select an available doctor, date, and time and submit a booking.	FR-3
S-06	Booking Confirmation and Token	Patient	Display successful booking details and the token number generated for the appointment.	FR-3
S-07	Current Token Queue	Patient	Display the current queue number, the patient's token number, and the	FR-4

			token status.	
S-08	Appointment Details	Patient	Display an upcoming appointment so the patient can cancel or reschedule it.	FR-5
S-09	Cancel / Reschedule Appointment	Patient	Allow the patient to cancel an upcoming appointment or choose another available date and time.	FR-5
S-10	Admin Dashboard	Admin	Provide navigation to the administrative functions supported by the system.	FR-6
S-11	Doctor Management	Admin	Allow the admin to add, edit, or remove doctor information.	FR-6
S-12	Schedule Management	Admin	Allow the admin to manage doctor schedules and availability.	FR-6
S-13	Appointment Management	Admin	Allow the admin to view and manage patient appointments and appointment status.	FR-6
S-14	Token Queue Management	Admin	Allow the admin to view queue order, call the next patient by token number, and update token status.	FR-6

4. Required Prototype States

Screen	State / Behaviour to Demonstrate	Related FR
S-04 Doctor Schedule and Availability	Available time slots are selectable; unavailable slots are not selectable.	FR-2
S-05 Appointment Booking	Successful booking; prevent booking when a time slot is already taken.	FR-3
S-06 Booking Confirmation and Token	Display the confirmed appointment and its generated token number.	FR-3
S-07 Current Token Queue	Display current queue number, patient's token, and updated status.	FR-4
S-09 Cancel / Reschedule Appointment	Cancellation updates status to Cancelled; rescheduling requires an available time slot.	FR-5
S-14 Token Queue Management	Use token statuses: Waiting, Called, In Operation, Completed, Cancelled.	FR-6

5. Navigation Summary

Patient flow: Register/Login → Doctor List and Information → Doctor Schedule and Availability → Appointment Booking → Booking Confirmation and Token → Current Token Queue. Patients can also open Appointment Details to cancel or reschedule an upcoming appointment.

Admin flow: Login → Admin Dashboard → Doctor Management / Schedule Management / Appointment Management / Token Queue Management.

6. Requirement Traceability

FR-1: S-01–S-02. FR-2: S-03–S-04. FR-3: S-05–S-06. FR-4: S-07. FR-5: S-08–S-09. FR-6: S-10–S-14.
